## I. INTRODUCTION

The Circum-Mediterranean Basin is considered as a reservoir of plant diversity and has been shown to contain hot spots that are recognized in some countries as relicts. Located on the Eastern shores of the Mediterranean Basin and at the heart of one of the 34 recognized world ‘hotspots’ for conservation priority, Lebanon harbors 2600 plant species with a high percentage of endemic plant species (12%) among which 221 are broad endemics and 90 are narrow endemics. The noted diversity is mostly the result of the physiography of the landscape, the country's location at crossroads between continents and impacts of human practices over the centuries (fire setting, clear-cutting, agricultural practices, heavy browsing and grazing).

Recognizing the threats facing the vegetation cover and plant specificity, the government has been mainstreaming most of its conservation efforts towards the protection and conservation of important ecosystems and forest communities since the signature and ratification of the Convention on Biological Diversity. Thus in-situ conservation and sustainable management of biodiversity figured at the top of the listed priorities in national action plan. Today, there are about 40 protected sites covering 1.8% of the Lebanese territory among which 9 are nature reserves. Six of these natural reserves represent terrestrial ecosystems among which 3 forests of cedar [Al-Shouf, Ehden and Tannorouine], 1 of mixed fir and cedar [Qamoua], 1 of pine [Bentael] and 1 old juniper forests [Yammouneh]; two cover coastal and marine ecosystems [Tyr and Palm Islands], while one gathers patches mosaic of terrestrial ecosystems and marshes [Amiq].

It is quite obvious that in-situ conservation in Lebanon, represented by a network of various terrestrial and marine ecosystems, lacks the representation of deciduous forest types such as the Turkey oak and other mixed deciduous tree species. These forest types represent ecosystem relicts and they are strictly localized in the country. Some of them represent southern most limit of deciduous tree species such as the Jabal Moussa and Chouane region.

## II. RATIONALE

Jabal Moussa, extending on 1250 ha and over altitudes ranging from 500 to 1500 meter, gathers Mediterranean, Montane and Supra-Mediterranean vegetation series. The region is home to more than 15 tree species and 200 plant species (Annex 1). The mountainous area, dominating two rivers [Nahr Eh Dahab and Nahr Ibrahim], reflects a typical Mediterranean landscape sheltering mosaics of plant communities. These communities represent nature refuge harbouring mixed and / or pure patches of *Ostrya carpinifolia* Scop., *Fraxinus ornus* L. and *Styrax officinalis* L. populations and *Quercus cerris* L. and *Q. callipinios* Oliv. and *Pinus brutia* Ten. tree species. The first two species are spontaneous, endemic

and occupy limited surface area in Lebanon. These are found in Nahr Ibrahim, Nahr EL Deheb, Ehmej, Mchati et Wadi Eljamajem. The *O. carpinifolia* stands are recognized for their biogeographic value, being the Southernmost limit of the species in Eastern Mediterranean. Thus the site can be acknowledged for its special value as a repository for old growth tree specimens of storax, pistachio, alder and hop horn-beam. These tree species, well preserved in Jabal Moussa, have been subject to wood cutting for fire wood in most of other Lebanese forests.

The mountain, in its north and west and south and south eastern, is imprinted by historical records showing anthropogenic activities and long-history of human interactions with forest in the Mediterranean region. These human activities; transhumance, agriculture, felling of the forests, grazing, fire, terracing, urbanization, and pollution; have sculptured the past, present and will leave prints on the future landscape. The area can be considered as a mountainous repository for different plant associations harbouring important birds, mammals and insects species.

Being of high biological, landscape and socio-cultural values, the Mountain calls for an urgent need for the conservation and sustainable management of natural resources to leverage their direct and indirect use values.

### **III. INVENTORIES & SURVEYS**

#### **III.1. MATERIALS & METHODS ADOPTED**

The sampling approach adopted to assess the diversity richness in the area and to complete the checklist developed through the period of work was stratified sampling. The quadrats were defined in different areas of Jabal Moussa area relying on the various physical and biotic parameters found.

A total of 20 visits were made to the region among which 8 were specific to execute a floristical relevé to assess the biodiversity in different regions of the Jabal and to estimate the diversity indice. The first visit targeted the reconnaissance of the different habitats and ecosystems found in the area as well as the performing of a preliminary checklist of the plant found. Previous to the field visit an inventory from the existing flora books has been performed in order to set a preliminary diagnosis on the importance of the areas and to have a clear vision on deciding about the sampling strategy.

### III.2.SITE DIAGNOSIS

#### III.2.1 BIODIVERSITY RICHNESS

Field expeditions and biodiversity surveys executed in 2007, 2008 and 2009 revealed the presence of more than 20 tree and shrubs species and more than 170 plant species of various importances at the local, national and regional level.

The preliminary inventory initiated in May 2007 for the Jabal Moussa region and its buffer zones listed 91 plant species among which 3 tree species (Lebanese Floras). The additional number of species (Total of 171 plant species) observed during field expeditions performed in spring and autumn 2007 and spring 2008 still reflects insufficient botanical assessment studies executed by missionary in early 19 centuries while developing national floras.

The diversity indices recorded high numbers varying between 25 and 65 plant species / 400 m<sup>2</sup> (Table 3). This observed value is one among the highest recorded in different sites in lebanon. Highest biodiversity indices were recorded at high peaks and in open forest habitats, while the lowest was observed on bed rocks. These bedrocks are shelter to specific plant species which will be investigated in the more specified project which will target the area as a Biosphere Reserve.

**Table 3.** Diversity richness in 400 m<sup>2</sup>

Region	Sub-region	Habitat/land cover	Diversity indices
Mchati	Shammis	Slopes/shrubland	44
	Al-Hebsh	Slopes/shrubland	48
	Al Sahleh	Mountain peak/open forest	65
Maou'al Al Ramieh		Slopes/shrubland	55
	Kornet Al Bayda	Slopes/shrubland/open forest	50
	Al Bayada	Slopes shrubland	49
Yahshoush			55
		Slopes/Bedrocks	25

### III.2.2. Conservation value

The surveys executed during the past two years (2007 and 2008) showed to be promising to find large number of species. It revealed that in total the site is home to 11 endemic species among which 4 are

specific to Lebanon and the other 7 are endemic to Lebanon, Syria and/or Turkey. Nine observed species figure on the list of species to be protected. Few of the plants are categorized as peculiar to the Mediterranean region (Table 4). The richness in bulbous species, among which many are of broad and narrow endemism, pinpoints the importance of conserving the area and considers it as a refuge for species listed nationally and internationally of great importance.

**Table 4.** Conservation and biological importance of the observed species

To be protected	Endemic to Lebanon
<i>Crocus ochraeucus</i> Boiss. & Gaill	<i>Asperula libanotica</i> Boiss. (End Lebanon)
<i>Cyclamen coum</i> Mill.	<i>Cyclamen libanoticum</i> Hildebr.
<i>Gladiolus segetum</i> Ker-Gawler	<i>Origanum libanoticum</i> Boiss.
<i>Iris histrio</i> Reich.	<i>Pentapera sicula</i> (Guss) Klotzsch. var. <i>libanotica</i> C. & W. Barbey. (Nahr Ibrahim)
<i>Paeonia mascula</i> (L.) Mill.	
<i>Epipactis</i> sp.	
<i>Pentapera sicula libanotica</i> Barbey.	
<i>Puschkinia scilloides</i> Adams. var. <i>libanotica</i> (Zucc.) Boiss.	
<i>Staehelina lobellii</i> DC.	
Peculiar to Mediterranean countries	Endemic Lebanon, Syria and Turkey
<i>Galium canum</i> Requien.	<i>Centaurea cheirolopha</i> (Fenzl.) Wagenitz
<i>Geranium libani</i> Davis	<i>Quercus cerris</i> L. var. <i>pseudo-cerris</i> (Boiss.) Boiss. (Amanus)
<i>Helichrysum sanguineum</i> (L.) Kostel	<i>Galium libanoticum</i> Herd.
<i>Hypericum thymifolium</i> Banks & Sol.	<i>Rubia aucheri</i> Boiss.
<i>Lamium truncatum</i> Boiss.	<i>Smyrnium connatum</i> Boiss & Ky.
	Endemic Lebanon and Syria
	<i>Saponaria bargyliana</i> Gomb.
	<i>Malus trilobata</i> (L.) C. K. Schn.

The area host plants listed in CITES annexes. The next developed applied research programme will investigate on the Orchid species and Ophrys species and bulbous plants found in Lebanon in addition to medicinal and aromatic plant species.

103. *Ononis spinosa*
104. *Origanum libanoticum* Boiss.
105. *Origanum syriacum* L.
106. *Ornithogalum libanoticum* (?!)
107. *Ornithogalum montanum* Cyr.
108. *Ostrya carpinifolia* Scop.
109. *Paeonia mascula* (L.) Mill.
110. *Pallenis spinosa*
111. *Pentapera sicula* (Guss) Klotzsch. var. *libanotica* C. & W. Barbey.
112. *Phillyrea media* L.
113. *Phlomis longifolia* Boiss. & Bl.
114. *Pirus syriaca* Boiss.
115. *Pistacia palaestina* Boiss.
116. *Platanus orientalis* L.
117. *Potentilla* sp.
118. *Prangos asperula*
119. *Primula vulgaris* Huds.
120. *Prunus ursina* Ky.
121. *Psoralea bituminosa* L.
122. *Pteridium aquilinum* (L.) Kuhn.

- 123. *Puschkinia scilloides* Adams var. *libanotica* (Zucc.) Boiss.
- 124. *Pyrus syriaca*
- 125. *Quercus calliprinos* Webb.
- 126. *Quercus cerris* L. var. *pseudo-cerris* (Boiss.) Boiss.
- 127. *Quercus infectoria* Oliv.
- 128. *Reseda* sp.
- 129. *Rhamnus alaternus*
- 130. *Rhamnus punctata* Boiss.
- 131. *Rhamnus* sp.
- 132. *Rhododendron ponticum* L.
- 133. *Rhus coriaria* L.
- 134. *Rosa* sp.
- 135. *Rubia aucheri* Boiss.

**Annex 3.** List of plant species observed during spring 2007, autumn 2008 and spring 2009 and those observed during the implementation of the ‘Projet d’Assistance à la Protection de la Couverture Végétale au Liban’. [Cont’d]

- 136. *Rubia tenuifolia* d’Urv.
- 137. *Rubus sanctus* Schreb.
- 138. *Rubus tomentosus*
- 139. *Ruscus aculeatus* L.
- 140. *Salix libani* Bornm.
- 141. *Salvia grandiflora* Etling.
- 142. *Salvia* sp.
- 143. *Salvia triloba* L.
- 144. *Sambucus ebulus* L.
- 145. *Sambucus nigra* L.
- 146. *Saponaria barylyiana* Gomb.
- 147. *Scabiosa* sp.
- 148. *Scutellaria* sp.
- 149. *Sideritis* sp.
- 150. *Silene cucubalis*
- 151. *Silene juncea* Sibth. & Sm. var. *pallida* Boiss.
- 152. *Silene* sp.
- 153. *Smilax aspera* L.
- 154. *Smyrnium connatum* Boiss & Ky.

- 155. *Sorbus torminalis* (L.) Crantz
- 156. *Spartium junceum* L.
- 157. *Stachys distans* Benth.
- 158. *Staehelina lobellii* DC.
- 159. *Sternbergia clusiana* Ker-Gawler
- 160. *Styrax officinalis* L.
- 161. *Tamus communis*
- 162. *Tanacetum cilicum*
- 163. *Teucrium divaricatum*
- 164. *Thessium humile*
- 165. *Trifolium stellatum* L.
- 166. *Umbilicus* sp.
- 167. *Urginea* sp.
- 168. *Valeriana dioscoridis* Sibth. & Sm.
- 169. *Verbascum* sp.
- 170. *Vicia tenuifolia* Roth.
- 171. *Viola odorata*

**Annex 4.** List of plant species collected during spring 2008.

1. *Alcea setosa* Boiss.
2. *Allium*
3. *Andrachne telephoides* L.
4. *Anthemis tinctoria*
5. *Arbutus andrachne* L.
6. *Arceuthos drupacea* (Labill.) Ant. & Ky.
7. *Aristolochia* sp.
8. *Asparagus acutifolius* L.
9. *Asperula libanotica* Boiss.
10. *Athyrium filix-femina*
11. *Atractylis comosa*
12. *Bryonia* sp.
13. *Calamintha vulgaris* Boiss.
14. *Calycotome villosa* (Vahl.) Link.
15. *Campanula rapunculus* L.
16. *Carlina involucrata*
17. *Centaurea eryngoides*

18. *Centaurea hololeuca*
19. *Centaurium* sp.
20. *Cephalaria keserwanensis*
21. *Cirsium diacantha*
22. *Cistus* sp.
23. *Clematis flammula L.*
24. *Cotoneaster nummularia L.*
25. *Crataegus monogyna*
26. *Crucianella*
27. *Cuscuta planiflora*
28. *Daucus carota*
29. *Delphinium staphisagria*
30. *Dianthus* sp.
31. *Dianthus orientalis brachyodontus*
32. *Echinops villosus*
33. *Eryngium creticum Lam.*
34. *Eryngium falcatum*
35. *Eryngium glomeratum*
36. *Euphorbia* sp.

**Annex 4.** List of plant species collected during spring 2008. [Cont'd]

37. *Fraxinus ornus L.*
38. *Fumana* sp.
39. *Gallium pestalozzae*
40. *Gallium pruscence*
41. *Hordeum bulbosum*
42. *Jasminum fruticans*
43. *Juniperus oxycedrus L.*
44. *Lactuca*
45. *Lamium truncatum Boiss.*
46. *Laurus nobilis L.*
47. *Lonicera numularifolia*
48. *Lonicera* sp.
49. *Malcolmia chia*
50. *Malus trilobata .(Lab.) C.K.Schneider*

- 51. *Michauxia campanuloides*
- 52. *Micromeria sp.*
- 53. *Ononis natrix L.*
- 54. *Ononis spinosa*
- 55. *Origanum libanoticum Boiss.*
- 56. *Origanum syriacum L.*
- 57. *Ostrya carpinifolia*
- 58. *Paeonia mascula (L.) Mill.*
- 59. *Pallenis spinosa*
- 60. *Phlomis longifolia Boiss. & Bl.*
- 61. *Pistacia palaestina Boiss.*
- 62. *Prangos*
- 63. *Primula vulgaris Huds.*
- 64. *Prunus ursina Ky.*
- 65. *Psoralea bituminosa L.*
- 66. *Pyrus syriaca*
- 67. *Quercus calliprinos*
- 68. *Quercus cerris L. var. pseudo-cerris (Boiss.) Boiss.*
- 69. *Quercus infectoria Oliv.*
- 70. *Reseda*
- 71. *Rhamnus alaternus*
- 72. *Rhus coriaria L.*

**Annex 4.** List of plant species collected during spring 2008. [Cont'd]

- 73. *Rosa sp.*
- 74. *Rubia aucheri Boiss.*
- 75. *Rubus tomentosus*
- 76. *Ruscus aculeatus L.*
- 77. *Salvia sp.*
- 78. *Salvia triloba L.*
- 79. *Scabiosa*
- 80. *Scutellaria*
- 81. *Sideritis*
- 82. *Silene cucubalis*
- 83. *Silene sp.*

84. *Spartium junceum L.*
85. *Stachys distans Benth.*
86. *Styrax officinalis L.*
87. *Tamus communis*
88. *Tanacetum cilicum*
89. *Teucrium divaricatum*
90. *Thessium humile*
91. *Umbillicus sp.*
92. *Urginea sp.*
93. *Verbascum sp.*
94. *Viola odorata*
